14mm  
Triade

INSTALLATION GUIDE

ADJUSTABLE SHELF FIXINGS

1

Use the spirit level to mark a level line at the required point of installation.

2

Use the tape measure and measure across all the hole centres

3

Transfer measurements across to the line on the wall for each centre point.

4

Now mark on the wall for each support screw hole, lining the shelf with the centre points previously marked on wall

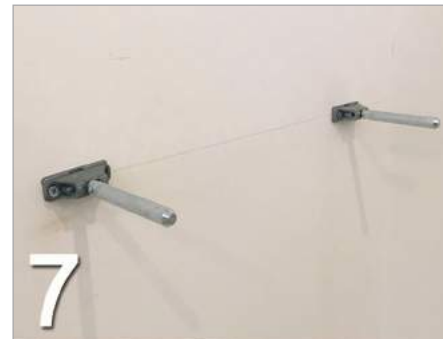

5

Use the masonry drill with a 7mm masonry or SDS bit, and drill to a depth of 75mm, (you can use masking tape as a depth gauge)

6

Insert the 7mm rawl plugs provided and if required use the hammer to ensure the plugs are flush

7

Screw each shelf support back to the wall, ensuring the shaft stays in line with centre mark (and the grub screw is facing down)

8

Place a spirit level across each of the supports and twist the shaft in/out to raise or lower the pitch until level

9

Take the shelf and gently onto the shelf supports until around half way onto the fixings

10

Using the spirit level and spanner (or pipe grips) gently rotate the shelf support left/right until shelf begins to level.

11

The shelf support can be locked in position by tightening the small grub screw underneath (shelf removed for demonstration only)

12

Gently push the shelf back firmly to the wall. Final check with the spirit level, adjust if necessary
