HAND CRAFTED OAK FURNITURE

16mm  
Rebar

INSTALLATION GUIDE  
HEAVY DUTY SHELF FIXINGS

1

Use the spirit level to mark a level line at the required point of installation.

2

Use the tape measure and measure across all the hole centres on the shelf

3

Transfer measurements across to the line on the wall for each centre point.

4

Drill to a depth of 75mm using first a 7mm pilot bit then a 12/13mm bit and finish with a 18mm (Use masking tape as depth gauge)

5

Measure the depth of the holes and if necessary cut the rebar to length using a hacksaw, before inserting fully in to shelf

6

Using the self mixing resin, inject resin in to the back of each drilled hole until around half full

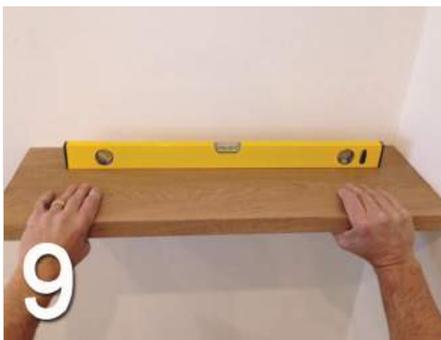

7

Take the shelf and align with each hole before pressing firmly into the resin until apx 2/3 onto the fixings, wipe away excess.

8

Push shelf back firmly to the wall in to a level position (resin will start to cure)

9

Level the shelf by gently moving it into position before the resin cures, (secure the shelf for apx 5-7 mins or until it holds itself)

10

As the resin starts to cure keep a check for level. Allow the resin to fully cure for 24hrs before placing objects on the new shelf.

## REBAR SHELF SUPPORT

The 16mm rebar & resin concealed shelf fixings are used as an extra heavy duty floating shelf support. The rebars can withold heavy items such as books, crocery, cookware, tv's, music systems & vinyl.

Each shelf support can hold 25kg in weight. For heavier weights, add more rebars to the shelf.

For resin curing times please revert to the manufacturers instructions.
